DETAILED ACTION

Response to Amendment

1. This action is responsive to an amendment filed 11/15/2005. Claims 3, 4, 6 and 7 are pending. Claims 1, 2 and 5 have been cancelled.

Response to Arguments

2. Applicant's arguments filed on 11/15/2005 Remarks have been considered but are moot in view of the new ground(s) of rejection.

Objections to Specification

3. The original disclosure filed is objected to because of the following informalities: because the phrases 'therefor' and 'an' in page 1, line 9 appears to be 'therefore' and 'a'.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2614

5. Claims 3, 4, 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Gettemy et al. (U.S. Patent No. 6,603,469).

Regarding claims 3 and 4, Gettemy teaches monitoring the display unit to see whether the display unit is in a display monochrome mode [i.e., display color number limiting mode] or not (fig.7, item 410);

determining inherently one of the plurality of switching clock frequencies to maintain an efficiency of the battery [i.e., DC/DC converter] at an optimum level in the predetermined low-power consumption mode (fig.9; col.8, lines 40-56);

switching the frequency to the determined switching clock frequency, and operating the DC/DC converter at this frequency (fig.10; col.9, lines 6-10).

Regarding claims 6 and 7, Gettemy teaches that the display unit is an LCD display unit (fig.2, item 105; col.5, lines 50-54).
